EXPLORER

ESE Encoder Signal Explorer

allows you to check the signals and
the functions that come from the encoder sensors
SKF NSK SME REINTACHO NIKE LINDE

Download file >

- * Standard power supply with Batt. 9v
220v / 12v power supply (optional)
- * Static mode (range 5v > 9v) direct connection
- * Dynamic mode : uses an interface cable between the AC motor and the Controller
this function avoids having to remove the motor itself in many cases
facilitating the identification of the defect with enormous time savings
- * Pulse selector 32/48 / 64 / 80 sensor bearing
if selected the display will show rpm/engine
- * Supplied Standard with Male/Female terminals/wires (manual connection)
- * Optional interface can be supplied sockets Plug-in as
2 x AMP (A+B)
1 x AMP for NSK 6206V and similar
1 x Linde systems and similar
1 x Reihitako Sensors and simolar
On specific request we supply customized connection cables
